

The diagram illustrates the structure of an Annotation Axiom. It shows a central flow from left to right, starting with a vertical bar labeled *Annotation Property*. This bar connects to a sequence of components: *SubAnnotation Property Of*, *Annotation Property Domain*, *Annotation Property Range*, and *Annotation Assertion*. These four components are grouped within a dashed box. The *Annotation Assertion* component leads to a vertical bar labeled *Annotation Value*. The *Annotation Value* bar connects to a sequence of components: *Literal*, *IRI*, and *Anonymous Individual*, which are also grouped within a dashed box. These three components lead to a final component, *Annotation Subject*. The *Annotation Subject* component leads back to the *Annotation Property* bar, completing the cycle. A self-loop arrow labeled with an asterisk (*) is shown on the *Annotation* bar at the top.
